

Python Libraries for Assignments

Posted 04 March 2021 17:17

We had a lot of questions about what external libraries are allowed. The simple question is, everything that is preinstalled on the DSLab servers. We do not want to pip install anything! When we run `"/software/anaconda3/bin/python3.7 yourscrip.py"` it should just work. Everything that prevents this (e.g. using pygame) is not allowed.

If you log into DSLab, run `python3` and it says that you do not have matplotlib or PIL installed then your PATH is wrongly configured.

Either run `"/software/anaconda3/bin/python3.7"` and it will work or for a more permanent solution configure your path to look in `"/software/anaconda3/bin"`
